

The PFAS-Tox Database was released in April 2021 with 29 PFAS which were selected based on having been commonly measured in the environment or in people. Mixtures and other chemicals analyzed in the studies of the 29 PFAS are also included in the database. These are: mixtures of PFAS (PFAS Mix) and mixtures of PFAS and other environmental chemicals (PFAS + other). Note, the well studied PFOA and PFOS are not included in this database which focuses on less well studied and emerging PFAS.
